METHODOLOGY

Overview

The wage study was designed to compare wage levels in South Dakota to wage levels in other states. The starting point and first metric is the median annual wage for a given occupation in South Dakota, as compared to the median annual wage for that exact same occupation in the other 49 states. Actual federal and state taxes are then computed for that specific occupation and subtracted from the median annual wage to arrive at a second metric “take home pay”. Take home pay is then adjusted by a cost of living index to arrive at a third metric being “purchasing power”.

The results are a fifty-state comparison for each of the 543 occupation types (SOC codes) that exist in South Dakota. For every occupation in South Dakota we show three metrics; they are gross pay, take home pay, and purchasing power. The same three metrics are computed for that same occupation in every state. What follows is a 543-page report, where each page is for a specific occupation; showing the gross pay, take home pay, and purchasing power for that job in all fifty states.

Data Sources

Median Wage – the median wage data is from the Occupational Employment Statistics (OES) Program, Bureau of Labor Statistics, US Department of Labor, released in March of the subsequent year. For most occupations, the median hourly pay was annualized by 2080 hours to arrive at annual gross pay. Certain occupations (teachers, air line pilots, certain medical professions) only list an annual median pay, in those cases we used the annual median pay.

Tax Calculations - The tax calculations include federal income tax, state income tax, and FICA/social security. The tax calculations are actual calculations for each income listed. For purposes of computing federal and state income tax it was assumed that each filer was single, uses the standard deduction, and had no other dependents. The accounting firm, Eide Bailly LLP, performed all the tax calculations.

Cost of Living Index – The cost of living index used in the wage study is from the US Bureau of Economic Analysis (BEA). The BEA produces regional price parities for every metropolitan statistical area and state in the USA. The South Dakota Wage Study uses the BEA’s state wide regional price parities to adjust take home pay to purchasing power.
